

Transportation University
NDTA-USTRANSCOM Fall Meeting

St. Louis Union Station
31 Oct – 2 Nov, 2016

Title: Methods for Achieving In-transit Visibility (ITV) for the DoD

Abstract:

1. Provide a background and overview of how automatic identification technology (AIT) along with quality processes and data enables ITV.
2. Provide an overview of the Coalition Mobility System (CMS). CMS is an unclassified logistics information sharing system enabling rapid coordination of movement planning and execution between the DoD and its partners throughout the world. A live demonstration of CMS and recent or planned enhancements will follow. (Internet connectivity is required)

NOTE: This class is designed at the following experience level for this topic – intermediate

Organization: U.S. Transportation Command J4-LT

Website: <http://www.ustranscom.mil/>

Instructor:

David Blackford is assigned as AIT/ITV Distribution Integrator, United States Transportation Command. He works with DoD agencies to ensure DOD AIT/ITV policies and process improvement efforts support the war fighters' operational requirements. Mr. Blackford current focus is integrating AIT technology in DOD and providing ITV capability across the enterprise.

Comm: 618-220-4723, DSN: 770-4723
