

Title: How does the Maritime Industry Operate?

Abstract:

The maritime industry is critically important to any economy. It is the main means for transporting goods internationally. Many sectors of a nation's economy rely on this industry as the principle mode of transportation of goods. The maritime industry is continually expanding their global infrastructure to transport goods to developed and developing nations consumers.

This session will provide the attendee an overview of the global maritime industry. The take away from this session will include a look into the basic principles and components of the international maritime industry, maritime industry's issues and challenges in the 21st Century.

Organization: American Military University
