

Title: The new normal to secure transportation and manage risk in the Supply Chain

Abstract: This class is designed at the following experience level for this topic – **intermediate**

Globalization, Mother Nature and political conflict have created conditions that require organizations to understand the vulnerability of transportation and tools such as Supply Chain Risk Management to mitigate security threats. SCRM requires four steps – to identify threats, measure threats, analyze threats and mitigate threats. This session will offer tools of SCRM such as a Risk Appetite tool and Supply Chain Maturity Heat Map. Two objectives in this session will be:

1. Learn to apply these tools when selecting suppliers
2. Enhance the resilience of your organization
